## PROFILE

I'm a Full-stack software engineer with 8+ years of experience building in both backend and frontend development scalable applications using React, Node.js, databases, and cloud systems. Experienced in developing modern front-end interfaces, APIs, microservices, CI/CD workflows, and performance-focused applications for SaaS, healthtech, fintech, and ecommerce.

## EDUCATION

### Master's in Computer Science & Information Systems

Nanjing University of Information Science and Technology – Nanjing, China

Aug 2016 – Jun 2018

### Bachelor's in Computer Science & Information Systems

National University of Costa Rica – Heredia, Costa Rica

Aug 2009 – Jun 2015

## SKILLS

- **Front-End Development:** React.js, Next.js, Remix, TypeScript, Tailwind CSS, CSS-in-JS, Apollo, Jest, Material UI, React Testing Library
- **Back-End:** Node.js, Rust, GraphQL
- **Databases:** PostgreSQL, MongoDB, MySQL, Firestore
- **Web3 / Blockchain:** Solana, Web3.js, dApp Development, Smart Contract Integration
- **Headless CMS & eCommerce:** Shopify, Sanity, MedusaJs
- **UI/Animation & Visualization:** Framer Motion, Three.js

## WORK EXPERIENCE

### ➤ Full-Stack Developer / June 2026 – current

[Open Earth Foundation], [Remote, USA]

- Helped build out the platform's support for AI agents, working on the API layer that lets AI assistants pull city climate data and interact with the product directly.
- Worked on the platform's AI-powered features — an action-recommendation tool for city climate plans and a conversational climate assistant — fixing bugs and improving the experience.
- Used AI-assisted coding tools day to day to move faster and stay productive while ramping up solo on a large, unfamiliar codebase.
- Cleaned up type safety and code quality issues to keep the codebase reliable and CI green.
- Redesigned parts of the emissions dashboard UI (modals, cards, layout) and wrote up a technical proposal for bringing a climate-risk feature natively into the platform instead of relying on an external tool.
- Improved the onboarding and login experience, fixed a security issue around redirect links, and kept tests and translations (5 languages) up to date as things changed.

### ➤ Full-Stack Developer / Aug 2025 – April 2026

[Augeo], [Remote, USA]

- Developed and maintained a scalable rewards platform using **React, TypeScript, Node.js, PostgreSQL, and MongoDB**, supporting production users and continuous feature delivery.
- Led and contributed to the **migration from a monolithic architecture to microservices**, improving deployment frequency by ~30% and reducing system coupling for better scalability and maintainability.
- Designed and implemented **RESTful and GraphQL APIs**,

- **AI & Developer Productivity:**  
Cursor, Claude Code
- **Tools & Developer Experience:** Git, Storybook, Bit (Bit.dev)

optimizing data access patterns and reducing average response times by ~20%.

- Improved application performance and user experience by optimizing **database queries, API endpoints, and front-end rendering**, resulting in faster load times and smoother UI interactions.  
Contributed to **CI/CD pipelines, automated testing, and code reviews**, helping reduce production bugs and improving overall code quality and release stability.
- Built and enhanced **responsive, accessible UI components** using modern front-end practices, increasing usability across devices and browsers.
- Leveraged **AI-assisted development tools (Cursor)** to accelerate development workflows, reduce implementation time, and improve code consistency across the team.

➤ **Web Developer** / Jan 2025 – Jul 2025

[Granicus], [Remote, Costa Rica]

- Maintained and customized **CMS-driven web applications** for multiple clients using modern front-end technologies, ensuring **responsive design, cross-browser compatibility, and consistent UI standards**.
- Translated **wireframes and high-fidelity designs** into **accessible, high-performance user interfaces** using HTML5, CSS3, and modern styling techniques (including responsive layouts and component-based design).
- Ensured compliance with **web accessibility standards (WCAG)**, improving usability for diverse user groups and meeting client requirements.

➤ **Web3 Full-Stack Developer (Contractor)** / Jan 2024 – Aug 2024

[FrankieLabs], [Remote, USA]

- Developed and maintained a **Solana-based decentralized application (dApp)** for a blockchain-powered rewards platform using **JavaScript, React, and Node.js**, supporting secure and scalable user interactions.
- Integrated **Solana smart contracts** with front-end applications using **solana/web3.js**, enabling real-time blockchain communication and transaction handling.
- Implemented core blockchain features including **wallet connectivity, token transactions, and on-chain data retrieval**, improving user engagement and platform functionality.
- Built **responsive, high-performance user interfaces** using **Tailwind CSS and atomic design principles**, ensuring consistency across devices and screen sizes.
- Contributed to code quality through **testing, debugging, and code reviews**, improving application stability and reducing production issues.

➤ **Full-stack web developer** / Dec 2021 – Aug 2023

[Parsley Health], [Remote, USA]

- Collaborated closely with design and product teams to develop and maintain multiple company applications, working across both established codebases and greenfield projects.
- Improved legacy applications by adding new features, refactoring and optimizing existing code, and resolving bugs to enhance performance and maintainability.

- Contributed to the architecture and development of greenfield applications, working across both front-end and back-end systems depending on project needs.
- Maintained a strong focus on code quality by ensuring high automated test coverage and following best engineering practices.
- Helped build and scale a consistent company-wide design system using Bit.dev and Tailwind CSS.
- Led team meetings and mentored new team members, leveraging deep product knowledge to support onboarding and team collaboration.

➤ **Full-Stack Web Developer** / Apr 2020 – Nov 2021

[TradeStation], [San Jose, Costa Rica]

- Developed a key product, YouCanTrade, contributing to both front-end UI and server-side functionality.
- Ensured reliability and scalability by following modern coding and testing standards.

➤ **Full-Stack Web Developer** / Jun 2019 – Mar 2020

[Proximity], [San Jose, Costa Rica]

- Built web applications with **reusable UI components** and REST APIs, focusing on performance and maintainability.
- Played a key role in developing a **social job platform for professionals aged 45+**, influencing both UX and technical decisions.
- Followed strong engineering practices — testing, pull requests, and peer reviews.

➤ **Front-End Developer** / Oct 2018 – Apr 2019

[Softon], [San Jose, Costa Rica]

- Developed **reusable UI components** and managed application state using GraphQL and REST APIs.
- Created test suites for UI components and data layers, working with IBM Carbon Components.
